

TAL-50B

System for Manual Sealing using 2 Component Sealants

LiSEC

CREATING VISIONS. PROVIDING SOLUTIONS.

Pump and batching system for manual application of one- and two-component sealants. Static precision mixers ensure optimal mixing of materials. The extended sealing bracket enables an optimised and smooth sealing performance also for larger units. The system can be flushed in just a few steps using the integrated base pump.

Highlights

- Easy placement of sealant drums in the ram press by means of pallet jack
- Low material losses thanks to small filling volume of the mixers
- Automatic batching of sealant volume
- Mechanically controlled mixing ratio
- Equipment can also be flushed with external flushing agent pumps
- Possibility to use freezing devices

Technical Data

Profile width	6 - 24 mm
Bracket arm	3 m
Catalyst drum	Ø 280 mm
Weight	803 kg
Electric connection	3,5 kW
Operating pressure air	6 bar
Air consumption	10 l/min
