

PC UPGRADES

LISEC MACHINES ARE DESIGNED FOR SMOOTH PRODUCTION OVER MANY YEARS.

Technical/Construction changes reserved. Text and symbol fotos may show optional equipment.

PDF generated: 07.05.2021

Why get PC upgrades?

Today, upgrades are critical. On the one hand, obsolete operating systems, i.e. due to termination by Microsoft, while on the other hand, the programs used by LiSEC (visualisation, code preparation, etc.) may only be able to be serviced somewhat or with serious additional effort.

Even with current hardware, obsolete operating systems are no longer capable of running and being used effectively.

LONGLiFE has specialised in this central control element and offers porting to the hardware of current LiSEC standard machines.

This results in the availability of replacement parts you expect and speedy, skilled help from our online service.

ADVANTAGES:

- Increased service life of your LiSEC machine
- Low-cost alternative to purchasing a new machine
- Simple and fast support in case of safety concerns
- Maintenance advantage thanks to a network connection
- Increased service availability via use of current software
- Ensures supply of replacement parts
- Minimum production downtime during modification (90% of preparation takes place in-house at LiSEC). Depending on the system, approx. 2 to 4 days
- Preventive measures against a system crash

SCOPE OF SERVICES:

- Beckhoff industrial PC from current serial production
- Monitor with touch panel
- Required monitor cable
- New control panel, depending on the configuration
- Visualisation connection with the respective PLC
- Necessary bus connections for PLC hardware
- New LiSEC software licenses
- Installation on-site is invoiced based on the actual work

Because not every customer is the same...

A detailed itemisation of costs is provided in your tailor-made offer, which you will receive shortly after making your enquiry.
